EDUCATION

Pune Institute of Computer Technology

Sept 2023 – June 2027

B.E. in Electronics and Telecommunication — CGPA: 8.53/10.0

Pune, Maharashtra

PROFESSIONAL SUMMARY

Backend & Systems Engineer building scalable distributed applications, 300+ concurrent users, 2K+ users served, real-time AI systems, cloud-native infra.

RELEVANT COURSEWORK

Core: Data Structures & Algorithms, Object Oriented Programming, Computer Networks, Database Management Systems

Software Dev: RESTful API Development, Full Stack Development, AI Development, Agile Software Engineering Principles, System Design, Cloud Architectures Architecture

PROJECTS

Distributed Remote Code Execution Engine — JavaScript, Python, Docker, gRPC, PostgreSQL, Redis, GCP

- Designed the architecture and developed a remote code execution system with JavaScript, Websockets, Redis Queues and Protocol, Python Flask and Docker-based Sandboxing.
- The submission works by remotely executing the code inside a docker container. Was used in our club PISB's coding events. Handled 300+ concurrent users with similar latency to LeetCode and Codeforces
- Deployed the backend on GCP, database on AWS with RSA encryption used Nginx for reverse proxies. Setup CI/CD pipelines using GitHub Actions

Credenz Website Backend — TypeScript, Nodemailer, PostgreSQL, GCP, AWS

- Developed and deployed the backend of our club PISB's main website which was used to get 2000+ registrations. Deployed the backend on GCP, database on AWS with RSA encryption used Nginx for reverse proxies. Setup CI/CD pipelines using GitHub Actions
- The website handled 3D model with no extra latency or performance bottlenecks, had 2000+ registration across entire Pune and was secure (carried out penetration testing).

Phason — TypeScript, NodeJS, Ollama-Llama3:8b

- Developed a local LLM-powered CLI tool distributed as an npm package that uses AI to automatically turn your staged git diffs into beautiful commit messages based on desired tone.
- Uses git-hook for auto generation of commits of staged gits. Achieved over 100+ installs within 1 month of shipping and 5 daily installs.

QuickSilver — TypeScript, NodeJS, ReactJS, Claude AI

- Built a real-time code generation platform using Anthropic Claude API, using WebSockets for live streaming of code and StackBlitz WebContainers for sandboxed Node.js based code execution
- Reduced manual development time by 63% for basic web apps

EXPERIENCE

Software Developer Intern

Jul 2025 – Jan 2026

Tecnvirons Pvt Ltd

Remote

- Designed and developed the architecture and coded the complete B2B client management system from the ground up, this includes ChatBot integration for various functionalities on WhatsApp (WABA) and Facebook, automated lead generation and marketing funnel on Facebook and Instagram, call-bot and voice-bot, payment integration using Razorpay for appointment booking and main website to hold all of that together.
- Used TS/JS and Python throughout my internship. Negotiated with clients over requirements and my product is generating 70% of the current company revenue
- Used CI/CD pipelines using GitHub Actions and Docker and automated deployed on Azure reducing the time by 30%.

TECHNICAL SKILLS

Languages: Java, Python, C++, C, JavaScript, TypeScript, Go

Databases: PostgreSQL, Supabase, Redis, RabbitMQ, MySQL, NeonDB, MongoDB, ChromaDB, FAISS.

Deployment: Docker, GitHub Actions, CI-CD, Azure, GCP, AWS, NGINX, Kubernetes

Tools & Frameworks: Express, Flask, FastAPI, WebSockets, LangChain, RAG, WebRTC, Prisma, Sequelize, Plivo
